Discretization: 1D

The problem

Discretization

Parallelization

LUND
UNIVERSITY

Discretization: Taylor expansion

The problem

Discretization

Parallelization

Taylor expand $u(x_{i+1})$ around $u(x_i)$:

$$u(x_{i+1}) = u(x_i) + hu'(x_i) + \frac{h^2}{2}u''(x_i) + \dots$$

LUND
UNIVERSITY

Discretization: Taylor expansion

The problem

Discretization

Parallelization

Taylor expand $u(x_{i+1})$ around $u(x_i)$:

$$u(x_{i+1}) = u(x_i) + hu'(x_i) + \frac{h^2}{2}u''(x_i) + \dots$$

Solve for $u'(x_i)$:

$$u'(x_i) = \frac{u(x_{i+1}) - u(x_i)}{h} + \mathcal{O}(h)$$

LUND
UNIVERSITY

Discretization: Taylor expansion

The problem

Discretization

Parallelization

Taylor expand $u(x_{i+1})$ around $u(x_i)$:

$$u(x_{i+1}) = u(x_i) + hu'(x_i) + \frac{h^2}{2}u''(x_i) + \dots$$

Solve for $u'(x_i)$:

$$u'(x_i) = \frac{u(x_{i+1}) - u(x_i)}{h} + \mathcal{O}(h)$$

Choose discretization:

$$v'_i = \frac{v_{i+1} - v_i}{h}$$

Here, v denotes the discrete solution variable.

LUND
UNIVERSITY

2nd derivative

The problem

Discretization

Parallelization

Use the finite difference approximation applied the first derivative in order to obtain an approximation for the second derivative:

$$v_i'' = \frac{v_i' - v_{i-1}'}{h} = \frac{\frac{v_{i+1} - v_i}{h} - \frac{v_i - v_{i-1}}{h}}{h} = \frac{v_{i+1} - 2v_i + v_{i-1}}{h^2}$$

LUND
UNIVERSITY

2nd derivative

The problem

Discretization

Parallelization

Use the finite difference approximation applied the first derivative in order to obtain an approximation for the second derivative:

$$v_i'' = \frac{v_i' - v_{i-1}'}{h} = \frac{\frac{v_{i+1} - v_i}{h} - \frac{v_i - v_{i-1}}{h}}{h} = \frac{v_{i+1} - 2v_i + v_{i-1}}{h^2}$$

Exercise: What is the accuracy of the approximation?

LUND
UNIVERSITY

Discretization: 2D

The problem

Discretization

Parallelization

LUND
UNIVERSITY

Discretization: 2D

The problem

Discretization

Parallelization

Simplifying assumption: Use grid spacing h in both dimensions.

Repeating the same exercise in x and y direction gives approximation

$$\frac{v_{i+1,j} + v_{i-1,j} - 4v_{i,j} + v_{i,j+1} + v_{i,j-1}}{h^2}$$

LUND
UNIVERSITY

Discretization: 2D

The problem

Discretization

Parallelization

Simplifying assumption: Use grid spacing h in both dimensions.

Repeating the same exercise in x and y direction gives approximation

$$\frac{v_{i+1,j} + v_{i-1,j} - 4v_{i,j} + v_{i,j+1} + v_{i,j-1}}{h^2}$$

Collect in a matrix: $\Delta u \approx A\mathbf{v}$

$$A = \frac{1}{h^2} \begin{bmatrix} & & & \ddots & & & & & \\ & 1 & \dots 0 & \dots & 1 & -4 & 1 & \dots 0 & \dots & 1 \\ & & 1 & \dots 0 & \dots & 1 & -4 & 1 & \dots 0 & \dots & 1 \\ & & & 1 & \dots 0 & \dots & 1 & -4 & 1 & \dots 0 & \dots & 1 \\ & & & & \ddots & & & & & & \\ & & & & & \ddots & & & & & \end{bmatrix}$$

Exercise: What changes if $h_x \neq h_y$?

LUND
UNIVERSITY

Parallelization

The problem

Discretization

Parallelization

- We could solve the problem on a single processor (left)
→ Slow if h is small.

LUND
UNIVERSITY

Parallelization

The problem

Discretization

Parallelization

- We could solve the problem on a single processor (left)
→ Slow if h is small.
- Use two (or more) processors (right)
→ **Domain decomposition**

LUND
UNIVERSITY

Parallelization

The problem

Discretization

Parallelization

- We could solve the problem on a single processor (left)
 - Slow if h is small.
- Use two (or more) processors (right)
 - **Domain decomposition**
- The interface Γ is artificial
 - No information available from the other side of Γ
 - The problem has fundamentally changed

LUND
UNIVERSITY

Dirichlet-Neumann Iteration

The problem

Discretization

Parallelization

- We need a method to solve the decomposed problem such that the solution converges to that of the original problem.

LUND
UNIVERSITY

Dirichlet-Neumann Iteration

The problem

Discretization

Parallelization

- We need a method to solve the decomposed problem such that the solution converges to that of the original problem.
- Communication between processor 1 and 2 should only happen through Γ .

LUND
UNIVERSITY

Dirichlet-Neumann Iteration

The problem

Discretization

Parallelization

- We need a method to solve the decomposed problem such that the solution converges to that of the original problem.
- Communication between processor 1 and 2 should only happen through Γ .
- Solution: Alternate between using Dirichlet and Neumann conditions.

LUND
UNIVERSITY

Dirichlet condition

$$\Delta u(x_i, y_j) \approx \frac{v_{i,j-1} + v_{i,j+1} - 4v_{i,j} + v_{i-1,j} + u_{DC}(y_j)}{h^2} = 0$$

LUND
UNIVERSITY

Dirichlet condition

$$\Delta u(x_i, y_j) \approx \frac{v_{i,j-1} + v_{i,j+1} - 4v_{i,j} + v_{i-1,j} + u_{DC}(y_j)}{h^2} = 0$$

Move data over to right-hand side:

$$\frac{v_{i,j-1} + v_{i,j+1} - 4v_{i,j} + v_{i-1,j}}{h^2} = -\frac{u_{DC}(y_j)}{h^2}$$

LUND
UNIVERSITY

Neumann condition

$$\Delta u(x_i, y_j) \approx \frac{\frac{v_{i,j+1} - v_{i,j}}{h} - \frac{v_{i,j} - v_{i,j-1}}{h} + u_{NC}(y_j) - \frac{v_{i,j} - v_{i-1,j}}{h}}{h} = 0$$

LUND
UNIVERSITY

Neumann condition

The problem

Discretization

Parallelization

$$\Delta u(x_i, y_j) \approx \frac{\frac{v_{i,j+1} - v_{i,j}}{h} - \frac{v_{i,j} - v_{i,j-1}}{h} + u_{NC}(y_j) - \frac{v_{i,j} - v_{i-1,j}}{h}}{h} = 0$$

Move data over to right-hand side:

$$\frac{v_{i,j+1} + v_{i,j-1} - 3v_{i,j} + v_{i-1,j}}{h^2} = -\frac{u_{NC}(y_j)}{h}$$

LUND
UNIVERSITY

Dirichlet-Neumann Iteration

The problem

Discretization

Parallelization

- Step 1: On Ω_2 - Obtain \mathbf{v}_Γ^k . Send to Ω_1 .
- Step 2: On Ω_1 - Receive \mathbf{v}_Γ^k from Ω_2 . Solve left system with \mathbf{v}_Γ^k as Dirichlet condition. From $\mathbf{v}_{\Omega_1}^{k+1}$, compute Neumann condition at Γ . Send to Ω_2 .
- Step 3: On Ω_2 - Receive data from Ω_1 . Solve right system with Neumann condition. Obtain $\mathbf{v}_{\Omega_2}^{k+1}$.
- Step 4: Relax - $\mathbf{v}_{\Omega_{1,2}}^{k+1} \leftarrow \omega \mathbf{v}_{\Omega_{1,2}}^{k+1} + (1 - \omega) \mathbf{v}_{\Omega_{1,2}}^k$.
